

## Questions for my Chatbot and its answers :

Q1) What are the most common social media platforms used?

Ans-Based on the provided data, the most common social media platforms used are Instagram and LinkedIn.

Q2) Give an example of a student who is addicted to social media

ans-Student ID 1 is an example of a student who is addicted to social media. They spend 5.2 hours per day on social media, primarily Instagram, which negatively impacts their academic performance. Their social media addiction score is 8.

Q3) Show a student who uses social media more than 6 hours daily.

ans-Student ID 6 uses social media for 7.2 hours per day.

Q4) Give me a summary of a student who mainly uses TikTok.

ans-Student ID 28 is a 20-year-old female undergraduate student from Singapore. She spends 4.4 hours per day on social media, mostly TikTok. This impacts her academic performance. She sleeps 5.9 hours nightly, has a mental health score of 6, is in a relationship, and reports no social media-related conflicts. Her social media addiction score is 7.

Q5) Is there a student from Nigeria who uses Facebook and has academic issues?

Ans- The provided text mentions a student from Nigeria (Student ID 42) whose academic performance is affected by social media use. However, the student primarily uses Instagram, not Facebook.

q6) Describe a student from India who uses Instagram more than 5 hours per day.

Ans- Student ID 136 is a 20-year-old female undergraduate student from India who uses Instagram for an average of 5.4 hours per day. Their social media use negatively impacts their academic performance.

q7) Can you tell me about a student who is not addicted, sleeps well, and has high mental health?

ans-I don't have information about any students who fit that description. The provided text only contains information about one student, and that student has a social media addiction score of 7, sleeps 6 hours a night, and has a mental health score of 6 (which is not considered high).

q8) Tell me about a female student from India who reports poor sleep.

Ans- Student ID 539 is a 20-year-old female undergraduate student from India. She reports sleeping about 5.7 hours per night.

q9) Generate 3 questions based on deductions from this dataset about Student ID 334.

Ans: Here are 3 questions based on deductions from the provided dataset about Student ID 334:

1. Given that Student ID 334's social media use (5.9 hours/day) negatively impacts their academic performance and their social media addiction score is 8 (presumably on a scale where higher numbers indicate greater addiction), what interventions might be effective in helping them reduce their social media use and improve their academic standing?
2. Considering Student ID 334's reported mental health score of 5 (on an unspecified scale), their significant daily social media use, and the impact of this use on their academics, is there a correlation between their social media habits and their mental well-being that warrants further investigation?
3. Although Student ID 334 reports no conflicts with their partner regarding social media use, could their high social media usage still be negatively affecting their relationship in other, less obvious ways?
